Freelance Work

“EarnEZ” App (Android & IOS)

Jan 2024 - Mar 2024

- “Earn-EZ” is the esports organizing platform for Android and IOS.
- Developed with Flutter and Firebase, it seamlessly operates across both platforms.
- While currently not available on app stores due to legal considerations, it continues to generate substantial revenue."

EarnEZ's Website

Feb 2024 - Mar 2024

- Created the EarnEZ website using JavaScript, HTML, and CSS, with Firebase hosting for seamless deployment and scalability.
- Designed a visually appealing and responsive UI/UX interface to cater to a diverse user base.
- Ensured robust security measures through Firebase authentication and HTTPS encryption for secure user interactions.

Personal Projects

“AI based Fraud Detection Brower Extension”

Inter-College Hackathon-2023 (SOLO)

- This extension is built to detect any suspicious or fraudulent domain/website using AI.
- It is build with Python using TensorFlow and Keras for model generation and Pocketbase for server-side model processing and data fetching.
- This extension works on any browser with upto 96.7% proven accuracy.

“Web Application for College Feedback Management”

Project for SYCET, Aurangabad (Mar 2023)

- It's a complete web application built for the personal use of SYCET, Aurangabad College, built with PHP and vanilla JavaScript along with MyPhpAdmin (MySQL).
- It's helping the college faculty to create a digital feedback form and get feedback from student online.
- Its responsive and engaging web UI make it more user friendly and interactive to student which replace traditional paper-based feedback process with user engaging and productive workflow.
